Product Name :
Compression Elastic Modulus Test Frame for concrete used on CTM

Product Code :
TEST5131RFQLAB-0001

Description :

Compression Elastic Modulus Test Frame for concrete used on CTM

Technical Specification :

Determination of Static Compression Elastic modulus on concrete requires a compression testing machine of controlling pace rate precision 1 grade.
This TEST FRAME adopts both dial gauge and displacement sensor. While the TEST FRAME measuring accuracy should be better than 0.001mm.
This TEST FRAME is a working stand which quality is very important to ensures the measuring data.
This TEST FRAME suitable for concrete specimen of prism, cube or cylinder with a gauge length 150mm. Easy and quick application to the specimen.
Technical Parameters
Gauge length: 150mm
Specimen range: prism, cube or cylinder
Dial gauge or inductive sensor are NOT included in the standard configure.
