

**Product Name :**  
Semi-Hermetic Two Piston Reciprocating Compressor

**Product Code :**  
TEST5187RFQLAB-0004

**Description :**

Semi-Hermetic Two Piston Reciprocating Compressor

**Technical Specification :**

Semi-hermetic two piston reciprocating compressor

Cut out from original compressor in a manner to expose all key important parts of the compressor.

In semi-hermetic compressors, the motor and compressor are not housed in a single shell. The motor and compressor are contained in different shells.

Compared with the hermetic compressor, the main difference is that the semi-hermetic compressor enclosure is bolted rather than welded.

This makes opening the compressor easier, which allows us to make repairs instead of having to replace the entire component.

Belt driven

With a Rotating Handle

Colour coded.
