

Product Name :
Elongation Index Test

Product Code :
TEST5194RFQLAB-0025

Description :

Elongation Index Test

Technical Specification :

Elongation Index Test is used for determining the elongation index of aggregates. The particle is elongated when its length (longest dimension) is more than 1.8 o the midsize of the sieve fraction.

The aggregate to be classified is separated into six sieve fractions from 6.3 to 50 mm and each fraction is examined separately.

Elongation gauge with particle size > 6.3 mm size

Weight: 2.5 Kg
